

**Bank credit hit a record high.
Two consumer categories grew
faster. One headline number is
misleading.**

₹219.3L Cr

total bank credit

15.76%

personal loans YoY

+9.57%

credit cards YoY

BANK CREDIT

₹219.3L Cr

Highest on record. Up ₹4.1L Cr from ₹215.2L Cr the prior period — the largest monthly gain in this window, continuing the climb from ₹178.7L Cr in January 2025.

SO WHAT

The credit cycle is expanding at an accelerating pace, with no sign of the correction that briefly slowed April.

PERSONAL LOANS

15.76% YoY

Up 0.38pp from 15.38% last period. Growth re-accelerated, reversing the prior slowdown and climbing back near the 75th percentile (15.8%).

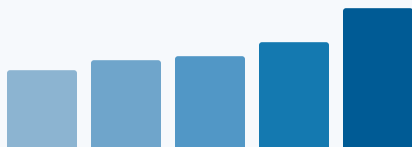

SO WHAT

The May dip looks like a pause, not a trend break. Growth is solid, though off the top of its range.

CREDIT CARDS

+9.57% YoY

Up 1.10 points from 8.47%. Fastest growth in 17 months — the fifth straight period of re-acceleration: 7.7% → 8.0% → 8.1% → 8.5% → 9.6%.

Feb → Mar → Apr → May → Jun 2026 · now at the top of the 18-period range (6.7%–9.6%)

POS TERMINALS

-15.8% YoY

Not a market move. This is almost entirely ICICI Bank, whose reported count fell sharply in a single month. Every other bank's fleet edged up over the year.

SO WHAT

Read the market off the other banks — flat to steady — not the headline, which reflects one bank's reporting change.

Credit and Payments Report
